# OVERVIEW

This project focuses on the analysis of the 'Netflix Movies and TV Shows' dataset sourced from Kaggle. Using Python for data preparation and Tableau for visualization, I aim to uncover viewer trends and patterns that provide valuable insights for content creators and decision-makers in the streaming industry.

# DASHBOARD 1

## Total Movies & TV Shows by Countries

## Top 10 Countries - Movie and TV Show Split

## Target Ages Proportion of Content by Country

## NETFLIX

## Movies and TV Shows Distribution

## How old are the Movies (TV Shows)? [Average]

# DASHBOARD 2

# INTERACTIVE DASHBOARD

For example, selecting 'United States' in the map, the remaining charts dynamically respond to this selection.

Dashboard 1: Filter Action: Select 'United States'

*Dashboard 1: Filter Action: Select 'United States'*

# INTERACTIVE DASHBOARD

Created the "Top N" parameter to enable dynamic control over the displayed items. Users can easily switch between different subsets of data without manual adjustments. Top N with limit from 1 to 15 with current value of 10 and can be changed the value by typing in the number, we want.

Dashboard 2: Top N: Change Top 10 to Top 1

# SOME INSIGHTS

- The USA stands out as the top creator of content for Netflix, followed by India and the UK, although they produce notably less content in comparison.
- This trend is understandable considering Netflix's American origins, which naturally lead to the USA being the leading contributor to its content library.

Map Chart: Total Movies & TV Shows by Countries

# SOME INSIGHTS

- Interestingly, Netflix in India is made up nearly entirely of Movies. Bollywood is big business, and perhaps the focus of this industry is Movies and not TV Shows. Conversely, South Korean Netflix is almost entirely TV Shows.
- The underlying reasons for the difference in content must be due to market research conducted by Netflix.

Bar chart: Top 10 Countries – Movie and TV Show Split
